

Our office has acquired a new and highly sophisticated computerized instrument and retinal camera which enables us to show detailed images of the front, middle and back of the eye.

OCT SCAN - Early detection of glaucoma, Macular degeneration, Diabetes, as well as other diseases by measuring the surface and underlying layers of the eye.

RETINAL CAMERA - Latest wide field retinal imaging system that captures expanded images of the retina which allows Dr. August to obtain a permanent record of the health of your eyes.

In many cases this can be done without dialation.

We recommend our patients to receive these tests as part of their comprehensive visual analysis. The fee for these procedures is \$95.00

I approve to have both extra tests done for \$95.00 _____
(Signature and Date)

I approve to have one of the tests done at a discounted price of \$60.00 _____
(Signature and Date)

OCT RP

I do not wish to have this special testing today _____
